

Arduino Nano R4

check footprints and define products

TODO: Check if STBY pin of CAN Transceiver must be pulled high or low
TODO: Define Temperature sensor decoupling cap. can it be left out?

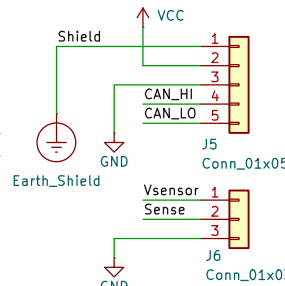

4.1 Pinout

The Nano breakout connectors pinout is shown in the following figure.

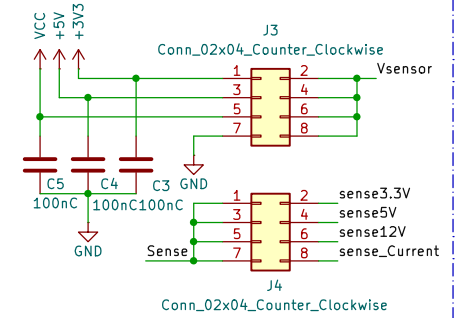

Pinout for Nano R4

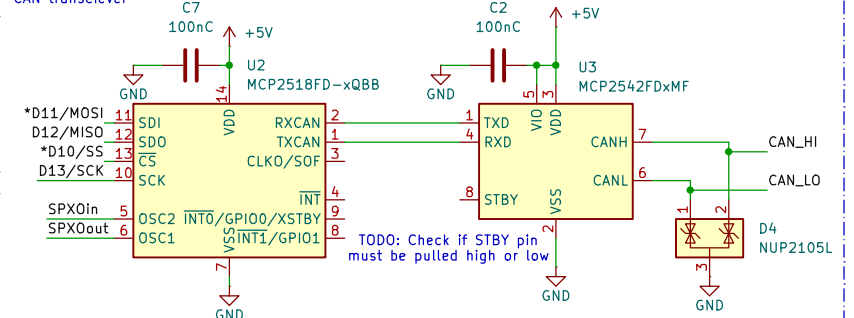

Connectors:
1x 5 pin M12 A-coded for CAN and power
1x 3 pin for Sensor

Jumpers: Voltage and divider select

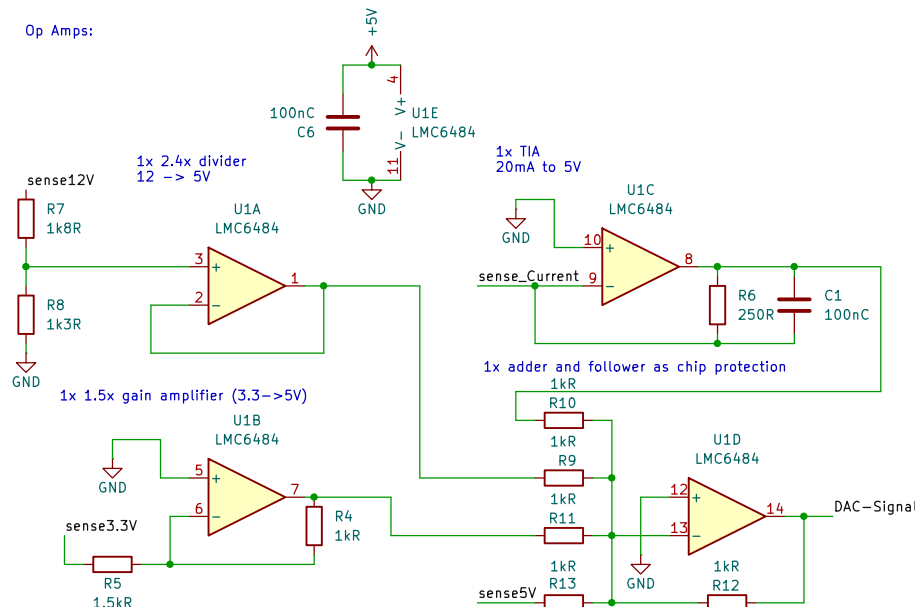

CAN transceiver

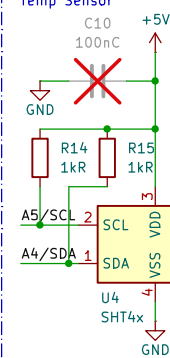

TODO: Check if STBY pin must be pulled high or low

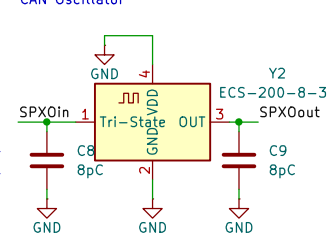

Op Amps:

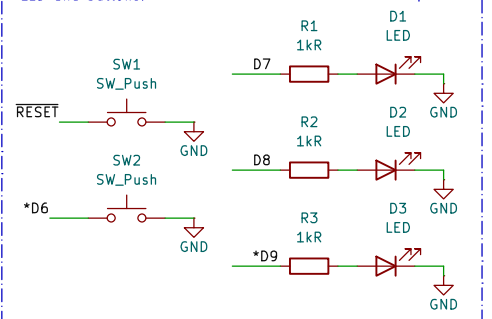

Option: Temp Sensor

CAN Oscillator

LED and buttons:

Varia
